[¶2] Amici are professional medical and mental healthanizations seekintop ensure that all adolescents, including those wighender dysphoria, receive the impal medical anothental health care they need and deservamici represent thousands of healthacproviders who have specific expertise with the issue aised in this brief. The Court should consider mici's brief because it provides important expertise anaddresses misstatements abthruit treatment of transgender adolescents.

_

¹ Amici affirm that no counsel for a pts authored this brief in whelor in part and that no person other than mici or their counsel made any monetary cibrottions intended tound the preparation or submission of this brief.

SUMMARY OF ARGUMENT

[¶3] Chapter 12.1-36.1 of the North Dakota CentOroyde (the "Healthcare Ban") prohibits healthcare providers from providing patients untobewith critical, medically necessary, evidence-based treatments for gender dysphôr Daenying such evidence-based dical care to adolescents who meet the requisite medical criteria putenthat risk of significant harm. Beloramici provide the Court with an accurate description of the vant treatment guideles and summarize the scientific evidence supporting the medical intentions prohibited by the Healthcare Ban for adolescents.

[¶4] Gender dysphoria is a clinical condition the saturated by distress due to an incongruence between the patient's gender iden (ity), the innate sense of one seed being a particular gender) and sex assigned at birth. This incongruence exact to clinically significant distress and impair functioning in many aspects f the patient's life. If not treated, or trated improperly, gender dysphoria can result in debilitating anxiety, despoin, and self-harm, at is associated with higher rates of suicide. As such, the efficiency treatment of gender dysphoria saves lives.

_

² Subsection 12.1-36.1-02(1)(c) prolitishmedical treatments that exadministered for the purpose of treating gender dysphoria, including "pulyebolocking medication to stop normal puberty," "supraphysiologic doses of testosterone to flesh and "supraphysiologic doses of estrogen to males." As discussed in this brief, these three are medically necessary care for certain adolescents with gender dysphorithe law provides that a high care provide who "willfully" provides such care is "guilty of a class A misseleanor." Chapter 12.1-36.1-02(2)(b). A legacy clause provides that the penalty

The widely accepted recommendation of the medical community, including that of the respected professional organtizers participating here exemici, is that the standard of care for treating gender dysphoria "gender-affirming care." Gender-affirming cares care that supports an adolescent with gender sphoria as they explotted gender identity—incontrast with efforts to change the individual's gender identity to nhattod ir sex assigned at birth, which are known to be ineffective and harmful. For adolescents with persistered dysphoria that worsens with the onset of puberty, gender-affirm care may include medicanterventions to align their physiology with their gender identities. Empirical evidence indicates at gender-affirming care, including gender-affirming

describes the professionally-accepted medical edgines for treating gender dysphoria as they apply to adolescents, the sciencially rigorous process by which the guidelines were developed, and the evidence that supports elificativeness of this care foot alescents with gender dysphoria. Finally, the brief explains how eth Healthcare Ban would irreparablarm adolescents with gender dysphoria by denying crucial cato those who need it.

changes caused by hormone ther happyome irreversible after those secondary sex characteristics are fully developed, others are ripially reversible if the patient discontinues use of the horm of the horm of the function of puberty blockes and/or hormone therapy be coupled with educanti on the safe use of such meadions and closen onitoring to mitigate any potential risk. Decisions regarding the appropriate treatment for each patient with gender dysphoria are made in collection with the patient, the parents or guardians, and the medical and mental health care teal there is "no one-size-fits-all approach to this kind of care."

B. The Guidelines for Treating Gender Dysphoria Were Developed Through a Robust and Transparent Process, Employing the Same Scientific Rigor That Underpins Other Medical Guidelines.

[¶22] The Guidelines are the product of careful and bust deliberation following the same types of processes—and subject to the same types gorous requirement—as other guidelines promulgated by a mici and other medical organizations.

[¶23] For example, the Endocrine Society's Guiides were developed llowing a 26-step, 26-month drafting, commentand review process. The Endocrine Society impses strict evidentiary requirements based on the internationally reizenth Grading of Remomendations Assessment, Development and Evaluation (GRADE) system That GRADE assessment is then reviewed, re-

reviewed, and reviewed again by multipliedependent groups of profession also Reviewers are subject to strict conflict interest rules, and there is pales opportunity for feedback and debate through the years-long review process. Further, the Endocrine Sinety continually reviews its own guidelines and recently determined that 20017 transgender care guidelines continue to reflect the best, most up-thate available evidence.

[¶24] First published in 1979, the WPATH Standards Cafe are currently itheir 8th Edition. The current Standards of Care are the resultrobust drafting, comment, a review process that collectively took five years? The draft guidelines went through rigorous review and were publicly available for discussion and bate, receiving a total of 2,688 comments 19 authors were ultimately involved in therfal draft, including feedback from properts in the field as well as from transgender individuals and their familities.

C.

published that investigated the use of published some adolescents with gender dysphoria, and nine studies have been published that shingwated the use of honone therapy to treat adolescents with gender dysphoria. These studies find positive notal health outcomes for those

_

⁵⁶ See, e.g. Christal Achille et al., Longitudinal Impact of Geder-Affirming Endocrine Intervention on The Mental Health and Wellhoge of Transgender Youths: Preliminary Results Int'L J

adolescents who received puberty blockers or **boentherapy**, including statistically significant reductions in anxiety, depresion, and suicidal ideation.

[¶26] For example, a 2020 study analyzed survey data from 89 transgender adults who had access to puberty blockers while adolessnts and from more than 3,40@ntsgender adults who did not.

The study found that those who received pubertyshong treatment had lower odds of lifetime suicidal ideation that those who wanted puberty blocking treatment but did not receive it, even after adjusting for demographic variables and level of family support Approximatelynine in ten transgender adults who wanted berty blocking treatment but did not received reported lifetime suicidal ideation. Additionally, a longitudinal sudy of nearly 50 transgender adolescents found that suicidal was decreased by a statistical sugnificant degreafter receiving gender-affirming homone treatment. A study published in January 2023, following 315 participants age 12 to 20 who received genomerating homone treatment, found that the treatment was associated with decrease emptoms of depression and anxiety.

[¶27] As another example, a prospective two-yfedlow-up study of adolescents with gender dysphoria published in 2011 found that treatments would blockers was associated with

Transgender Adults

III. The Healthcare Ban Would Irreparably Harm Many Adolescents with Gender Dysphoria By Denying Themthe Treatment They Need.

[¶29] The Healthcare Ban denies adolescents weighthder dysphoria in North Dakota access to medical interventions that are designed to invertealth outcomes diralleviate suffering and that are grounded in science and endorsed by multiplical community. The medical treatments prohibited by the Healthcare Ban can be a cruposital of treatment for adolescents with gender dysphoria and necessary to preserve their health.

[¶30] As discussed above, research shows that adolescents with gender dysphoria who receive puberty blockers and/or hormortherapy experience less depositions, anxiety, and suicidal ideation. Several studies have found that hormography is associated with reductions in the rate of suicide attempts and signification provement in quality of life. In light of this evidence supporting the connection between lack of access to gender-affirming notable time suicide risk, banning such care can positions? lives at risk.

CONCLUSION

[¶31] For the foregoing reasons, those urt should grant Plainfits' motion for a temporary restraining order and preliminary injunction.
